Application/Control Number: 10/079,010

Art Unit: 2832

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 2

Claims 7-10, 12-13 and 15 and 17-20 are rejected under 35 U.S.C. 103 as being obvious 2. over by Yamada in view of Szupillo, Copetti et al. or Sato (61-27264). Yamada discloses the claimed invention at Fig. 10, except the material of the outer barrier being tantalum pentoxide. and the sputtering of claim 12. The single metal thin film resistive layer of nichrome is at the top of col. 6, meeting claims 8-10, 13 and 15, with double protective layers for claim 15. Sato discloses sputtering a tantalum oxide layer for the purpose of providing a protective layer so that it would have been obvious to employ a sputtered layer, to replace the protection layer of Yamada, for protection where the references disclose a protection layer or double protection layer for a resistor. Paragraphs 63 and 69 of Copetti et al. disclose dielectrics of tantalum pentoxide, as substitutes for other dielectrics, and providing protection or barriers for nichrome resistors such as that of Yamada, so that it would have been obvious to form one or two layers of such a material where it is a well known protective layer compatible with nichrome resistors as Szupillo discloses dielectrics of tantalum pentoxide, as substitutes for other suggested. dielectrics, and notes that same is a barrier layer, providing protection or barriers for resistors such as that of Yamada, so that it would have been obvious to form one or two layers of such a material where it is a well known protective layer compatible with resistors as suggested, and where Yamada discloses a barrier layer. For claims 13 and 15, the alumina substrate is at col.

Application/Control Number: 10/079,010

Art Unit: 2832

7. As an alternative to claim 12, Copetti discloses depositing the tantalum pentoxide layer, and sputtering is a well known method of deposition, rendering such a process obvious. Or it is not clear how sputtering the layer renders it distinct from other methods of deposition, so that such a layer is met by deposition as a product by process limitation rendering no distinct structure. For claim 19, Fig. 1 discloses the electrodes 27 wrapping around the top. For claim 20, the thin film of nichrome noted above meets the claim. For claim 18, the outer layer can meet the test where it is the same material.

Page 3

- 3. Applicant's arguments filed 7/6/04 and 9/7/04, have been fully considered, and are not persuasive or are moot due to the new grounds of rejection. The argument that the Sato resistor is a different type of resistor is not persuasive, where each reference discloses protecting a resistor, and a suggestion for the combination is disclosed. The argument that the layers as modified do are not moisture barriers is not correct since the function is performed by the same material. The argument that there is no motivation for the combination is not correct since the motivation is as noted above.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl D Easthom whose telephone number is (571) 272-1989. The examiner can normally be reached on M-Th, 5:30AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Elvin Enad can be reached on (571) 272-1990. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
